

Safer and better care

Patienttrack is a complete digital & mobile bedside solution proven to improve patient safety, quality & efficiency of care in one easy-to-use application.

Patienttrack helps hospitals improve patient care by planning and performing patient observations, assessments and clinical documentation at the bedside, thereby ensuring the early detection of, and timely clinical response to deteriorating patients and those at risk 24x7.

➤ **Electronic observations, assessments, risk scoring & alerting**

No more missed observations or assessments. Highly configurable and personalised patient monitoring and assessment. Automatically initiates appropriate follow up tasks, care plans, referrals and alerts.

➤ **Real-time patient data presented as & when needed 24x7**

Clinical notes, patient status and care plan information presented when and where required, whether to support raised alerts, referrals, handover or infection control.

➤ **Improved team collaboration & communication**

Highly configurable alerting and communication via individual's preferred communication channel including paging, SMS, email and instant messaging. Enhances collaboration across multi-disciplinary teams and well as supporting tiered response to deteriorating patients, outreach, MET and other services.

➤ **Enhanced ward processes & task management**

Real-time patient data presented in your chosen way to support staff planning, personalised care planning, bed management, discharge planning, handover, ward rounds, prioritised patient care, Hospital at Night as well as scheduling and completion of both patient and non-patient (e.g. porter) tasks.

➤ **Status, compliance & performance reporting**

Clinicians can see personalised views of patient data and outstanding alerts and tasks, while ward-to-board reporting helps hospitals monitor patient status, clinical performance and compliance thereby reinforcing a culture focused on quality and continuous improvement.

The Patienttrack advantage

Delivering proven financial and clinical benefits

➤ Improve

Clinical response and compliance
Team collaboration
Quality, safety and efficiency
Time to care
Patient flow
Patient outcome/experience

➤ Reduce

Mortality, cardiac arrests and ALOS
Harm from adverse events
Infection outbreaks
Unplanned admissions to ICU
Variability in care
Avoidable readmissions

Health technology in action

Hospitals have different needs and priorities, so Patienttrack is engineered to provide the greatest degree of configurability and flexibility available across:

➤ Care settings

Configurable for all specialist care settings including emergency department, paediatrics, maternity and other environments requiring tailored observations, assessments, risk algorithms and/or clinical protocols.

➤ Personalised care

Altered parameters can be applied down to an individual patient.

➤ Open integration

Patienttrack integrates with your existing hospital systems using both traditional HL7 interfaces and open web services.

➤ Communication options

You choose from a wide range of supported communication channels without being constrained to only one.

➤ Enterprise architecture

Aligned with, and hosted on your enterprise ICT architecture and committed to support emerging health ICT trends.

➤ Mobility platform

Device agnostic support for smart-phones, tablets, desktops, workstations on wheels and other devices as well as integration to direct monitoring devices.

➤ Phased implementation

Support for different implementation starting points and approaches to rolling out functionality.

➤ Continual improvement

A rich clinical dataset available to facilitate the research required to drive evidence based refinement of clinical protocols.

➤ Reporting options

Personalised reporting at clinician, ward, specialty, exec and board levels to deliver quality patient outcomes and cultural change through effective performance management and increased accountability.

➤ Shared learnings

Benefit from the learnings and share innovative solutions developed by other Patienttrack users through our local and international user groups.

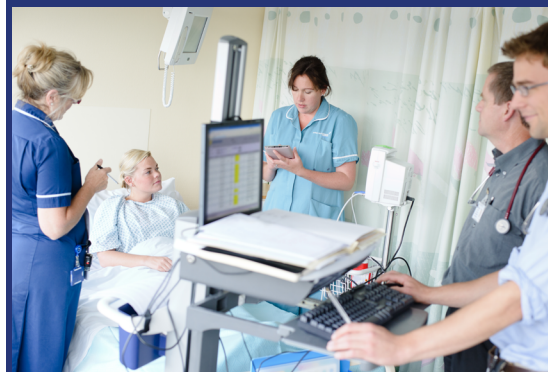

Making a positive difference

Patienttrack is swift to implement. Once implemented, payback on your investment will typically be achieved in less than a year with almost immediate benefits reported in critical areas such as reduced cardiac arrests, increased compliance with completing patient assessments and many other benefits driving both financial savings and improved patient outcomes. You will also see improved morale and productivity among nursing staff and more collaborative team behaviour.

Every year, Patienttrack is helping deliver safer and better care to nearly a million patients across Australia, New Zealand, England, Scotland and the Isle of Man. A further testament to its unrivalled configurability to local health system requirements.

"This is a prime example of eHealth at its best: clinical teams collaborating with technology specialists to deliver better, safer care for patients."

William Edwards
general manager for
eHealth and IM&T

"The introduction of Patienttrack has proved to be one of the most successful clinical IT projects so far, and getting IT to every bedside is providing a foundation on which to deliver other clinical applications."

Dr Richard Venn
consultant in intensive care

"This kind of electronic system enables us to identify deteriorating patients more quickly and to manage them earlier into their deterioration, so they're more acutely unwell for a shorter period of time."

Dr Steve Jones
consultant in emergency and
critical care medicine
